

COASTLINE PATHWAYS DESIGN PRINCIPLES

Coastline Pathways is an equity-centered mindset and practice to facilitate student success.

1 Timeline:

We are working to implement guided pathways at scale for all new students entering in Fall 2020.

2

Focus / Mission

Each workgroup will propose a focus and mission for the workgroup that will be reviewed and approved by the Guided Pathways Core Team.

4

Transformation:

We are working to transform Coastline's approach to better serve today's students on their journey - not tweak around the edges.

3

Consider Coastline:

Workgroups should design for Coastline first and identify district implications.

6

Decision Making:

Workgroups will make recommendations to the Guided Pathways Core Team; the Core Team communicates effectively and solicits feedback where necessary, refines recommendations, informs PIEAC and recommends to College Council with President making final decision.

7

Student Segments:

Pathways reforms need to be designed for both face-to-face and online / distance students.

8

Funding:

Assume that there is no new funding and any support funding comes through the regular funding request process.

5

History:

We acknowledge and are proud of our institutional history but we are not tied to past practices as we build Coastline's future.

10

Use of Mandatory:

Workgroups can include mandatory steps for students in their designs, which will be reviewed and approved through the process.

12

Advising:

Coastline will implement case management advising, aligned with national standards and best practices, tailored to the needs of individual students.

9

Math / English Requirements:

Maps and Metajors need to enable students to complete transfer-level Math and English in their first academic year (AB 705).

11

Student Voice:

All workgroups should include students in the design process.

13

Equity Mindset:

All designs need to integrate an equity mindset to ensure that completion and post-graduation outcomes improve and become equitable for all groups.

14

Professional Development:

All workgroups should identify professional development and training necessary to implement changes.

Coastline's Design Principles

In general, "design principles" are concise, specific guidelines for generating ideas and artifacts. Good Design principles provide a common language and serve as shared reference points for design, development and deployment. Working from shared principles helps teams make decisions independently while sustaining a consistent, coherent vision. They can be filters for making decisions.

Adopted from 18F of the General Services Administration 18f.gsa.gov

1. **Timeline:** We are working to implement Guided Pathways at scale for all new students entering in Fall 2020.
2. **Focus/Mission:** Each workgroup will propose a focus and mission for the workgroup that will be reviewed and approved by the Guided Pathways Core Team.
3. **Consider Coastline:** Workgroups should design for Coastline first and identify District implications.
4. **Transformation:** We are working to transform Coastline's approach to better serve today's students on their journey – not tweak around the edges.
5. **History:** We acknowledge and are proud of our institutional history but we are not tied to past practices as we build Coastline's future.
6. **Decision-Making:** Workgroups can include mandatory steps for students in their designs, which will be reviewed and approved through the process.
7. **Student Segments:** Pathways reforms need to be designed for both face-to-face and online/distance students.
8. **Funding:** Assume that there is no new funding and any support funding comes through the regular funding request process.
